

# Efficient Endpoint Security Management without Compromise

Combining Kaseya and Webroot provides the security, efficacy, ease of management, and cost savings endpoint administrators need to protect clients and users. Webroot supports Kaseya versions 9 and above, and the Webroot Kaseya module is available as a single executable that takes only minutes to install and configure, in line with other Kaseya modules for Kaseya on-premises VSA software. With this integration, all crucial endpoint management data is combined and available in one place to increase efficiency, shorten response times, and take full advantage of the mutual benefits Kaseya with Webroot brings.

This Kaseya integration delivers:

- » **Powerful deployment management**  
Intuitive, straightforward GUI-driven install/uninstall  
Auto-install feature significantly reduces administration overhead  
Install/uninstall and management support for Apple® computers
- » **Combined deployment & status dashboard**  
Single view for endpoint security parameters
- » **Powerful search capabilities**  
Search via Kaseya group, machine ID, or other criteria
- » **Deployment flexibility**  
Management for Kaseya groups via Webroot groups, or sites with single or multiple keys
- » **Auto-discovery**  
Automatic recognition and management for already installed Webroot agents via VSA
- » **Unintentional agent uninstall warning**  
Installation status prevents unintentionally uninstalling agent software
- » **Installation/uninstallation status alerts**  
Optional alerts if install/uninstall attempts fail
- » **Attention required alerts**  
Alerts when endpoint agent is unable to automatically remediate threats
- » **Alert-based actions**  
Alerts for alarms, ticket creation, script running, and email sends
- » **Integration of Webroot Unity API (REST API)**  
Streamlined Webroot agent deployment and setup  
Remote commands to run updates, deep scans, cleanups, and full scans
- » **Extensive agent info**  
30 Webroot-specific data points and 40 additional Kaseya-loaded agent data points
- » **Endpoint threat history**  
Individual or combined endpoint threat history reports

**Kaseya Dashboard with Webroot Integration**

## Benefits of Using Webroot with Kaseya

### Cloud-based architecture

Provides fully remote access and management

### Kaseya integration

Unifies and further improves ease of administration and administrator productivity

### Highly effective protection

Minimizes support/help desk calls and improves user productivity

### Automatic roll-back remediation

Renders reimaging virtually unnecessary

### Zero definitions or signature updates

Lowers operational costs and ensures endpoints stay compliant and up to date

### Low device footprint

Improves system performance

### Intuitive, automated operational management

Reduces administration

### Installs in under five seconds<sup>†</sup>

Deploys with ease

### No-conflict agent

Enables secure solution migration or layered protection

### Powerful remote agent command toolset

Offers full control over individual or groups of endpoints

### Hierarchical policies and enforcement

Provides global site, user group, and user level control

### No on-premises endpoint management hardware or software

Streamlines management with cloud-based console

## About Webroot

Webroot delivers next-generation network and endpoint security and threat intelligence services to protect businesses and individuals around the globe. Our smarter approach harnesses the power of cloud-based collective threat intelligence derived from millions of real-world devices to stop threats in real time and secure the connected world. Discover Smarter Cybersecurity™ solutions at [www.webroot.com](http://www.webroot.com)
