

Efficient Endpoint Security Management without Compromise

Combining Kaseya and Webroot provides the security, efficacy, ease of management, and cost savings endpoint administrators need to protect clients and users. Webroot supports Kaseya versions 9 and above, and the Webroot Kaseya module is available as a single executable that takes only minutes to install and configure, in line with other Kaseya modules for Kaseya VSA Cloud. With this integration, all crucial endpoint management data is combined and available in one place to increase efficiency, shorten response times, and take full advantage of the mutual benefits Kaseya with Webroot brings.

This Kaseya integration delivers:

- » **Powerful deployment management**
Intuitive, straightforward GUI-driven install/uninstall with support for Windows® and Apple® computers
- » **Combined deployment & status dashboard**
Single view for endpoint security parameters
- » **Installation/uninstallation status**
View of Webroot agent installation status
- » **Powerful search capabilities**
Search via Kaseya group, machine ID, or other criteria
- » **Kaseya Live Connect support**
Single-click Live Connect support via the Webroot module
- » **Extensive agent info**
30 Webroot-specific data points and 40 additional Kaseya-loaded agent data points

Benefits of Using Webroot with Kaseya

Cloud-based architecture

Provides fully remote access and management

Kaseya integration

Unifies and further improves ease of administration and administrator productivity

Highly effective protection

Minimizes support/help desk calls and improves user productivity

Automatic roll-back remediation

Renders reimaging virtually unnecessary

Zero definitions or signature updates

Lowers operational costs and ensures endpoints stay compliant and up to date

Low device footprint

Improves system performance

Intuitive, automated operational management

Reduces administration and costs

Installs in seconds[†]

Deploys with ease

No-conflict agent

Enables secure solution migration or layered protection

Powerful remote agent command toolset

Offers full control over individual or groups of endpoints

Hierarchical policies and enforcement

Provides global site, user group, and user level control

No on-premises endpoint management hardware or software

Streamlines management with cloud-based console
