

Integrating threat intelligence into your products should not be a daunting task. Webroot specializes in working hand-in-hand with security vendors to ensure the rapid and beneficial integration of BrightCloud[®] Threat Intelligence Services into their offerings. To assure success, we have instituted a three-phased proof-of-concept approach that includes functional testing, performance testing, and integration design. Our goal is to guarantee that integration with the BrightCloud Threat Intelligence Services add value, meet expectations, and effectively differentiate your product in the market.

THREE SIMPLE STEPS TO SUCCESS

BRIGHTCLOUD[®] THREAT INTELLIGENCE PROOF OF CONCEPT

1: FUNCTIONAL TESTING

Fully experience BrightCloud Threat Intelligence Services' optimum coverage, deep threat insight, and the availability and stability it provides to meet the strictest requirements, with data updates every 5 minutes.

2: PERFORMANCE TESTING

During performance testing, the Webroot SDK demonstrates its ability to meet or exceed the requirements of gigabit appliances and network throughput in order to make real-time determinations.

SPEED: 4-6 million lookups per second for real-time processing without latency

SCALABILITY: Scales to adapt to internet spikes with the help of AWS' elastic cloud (EC2)

AVAILABILITY: Exceeds five nines in annual uptime

BREADTH: Billions of pieces of information from millions of endpoints accessed in real time.

STABILITY: Fault-tolerant platform proven in-market for over a decade

3: INTEGRATION DESIGN

Determine the most efficient integration to optimize BrightCloud Threat Intelligence Services for your unique application. We provide a customized integration architecture with an SDK, to speed up implementation, development, and time-to-market.

Webroot, a pioneer in machine learning-based, operational threat intelligence strongly endorses the concept of collective security and has built the world's largest community of networking and security industry leaders. Our partners benefit from this collective security model by being informed of new threats detected anywhere across the globe in near real-time with predictive intelligence for better threat management. With Webroot BrightCloud Threat Intelligence Services, our partners enhance existing features, build new security functionality, and differentiate their offerings.
