The Webroot Platform analyzes and correlates data to create a predictive risk score, which falls into one of five rating bands ranging from trustworthy to malicious. The BrightCloud IP Reputation Index provides scores ranging from 1 to 100, with tiers split into Trustworthy, Low Risk, Moderate Risk, Suspicious, and High Risk. Numerically lower scores indicate IPs that are more likely to be or become bad, and are monitored at a greater frequency than trustworthy IPs.

The reputation tiers enable enterprises to finely tune their security settings based on their risk tolerance and business needs. This enables them to proactively prevent attacks by limiting the exposure of their networks to dangerous or risky IPs. For example, a highly security conscious bank may choose to block anything with a score lower than 80, while others may choose to accept traffic from IPs with scores higher than 60 as long as the site being accessed is affiliated with a partner.

Today, cybercriminals have an immense number of exploits and attack vectors available, and they use numerous techniques to hide their identities and activities, such as encrypted communications, DNS cache poisoning, URL redirection, hyperlink obfuscation, etc. Disabling inbound communications from IPs known to be malicious, which have associations with other malicious online objects, is a highly effective way to keep networks secure.

IP addresses are not static and may cycle from malicious to benign and back multiple times. In 2019, Webroot found that more than 96% of bad IP addresses showed malicious activities more than once. In addition, approximately half of the analyzed IPs showed malicious behavior more than 10 times. However, many publicly available lists are static and outdated.1

The BrightCloud IP Reputation Service supports operational security needs by providing a dynamic service to inform automation decisions and strengthen defenses. With a continuously updated feed of known malicious IP addresses, IT security administrators can easily identify threats by type to protect their networks and gain dramatic improvements in security efficacy and efficiency. This service integrates seamlessly and is tailored for your operational needs and use cases.

The BrightCloud IP Reputation Service is powered by the Webroot Platform, which uses a big data architecture to provide the most comprehensive and accurate threat intelligence available today, including up-to-the-minute intelligence on millions of emerging threats. This intelligence can be used to block traffic from TOR nodes, proxies, botnets, and other malicious actors.

Customers can also access a rich set of metadata for investigative purposes. For example, proxies have been used for more than just obfuscation, but also to launch short span DDoS attacks. Similarly, botnet command and control contains BOT IPs as well as the originating central server IP.

In addition, add-on IP Threat Insights provides supplementary evidence of why an IP was tagged as malicious, including the type(s) of malware it distributed, ports and protocols used, and the time span that it posed a threat.

The Webroot Platform analyzes and correlates data to create a predictable risk score, which falls into one of five rating bands ranging from trustworthy to malicious. The BrightCloud IP Reputation Index provides scores ranging from 1 to 100, with tiers split into Trustworthy, Low Risk, Moderate Risk, Suspicious, and High Risk. Numerically lower scores indicate IPs that are more likely to be or become bad, and are monitored at a greater frequency than trustworthy IPs.

The reputation tiers enable enterprises to finely tune their security settings based on their risk tolerance and business needs. This enables them to proactively prevent attacks by limiting the exposure of their networks to dangerous or risky IPs. For example, a highly security conscious bank may choose to block anything with a score lower than 80, while others may choose to accept traffic from IPs with scores higher than 60 as long as the site being accessed is affiliated with a partner.

Partner Benefits

» Differentiate yourself from your competition
  Offer your customers dynamic, industry-leading protection against millions of malicious IPs

» Minimize false positives
  Harness the world’s most powerful cloud-based security analysis engine

» Easy to integrate, easy to use
  Simple integration into your solution via RESTful API, STIX, and an SDK

» No impact on your network
  Protects through your network devices and increases user capacity by eliminating unwanted traffic

BrightCloud IP Reputation in Action

To keep the list updated and accurate, Webroot uses a detention methodology to evaluate IPs. The service:

» Deploys an automated algorithm to identify suspicious IPs
» Examines and correlates by the IP
» Applies built-in rules to test the IP
» Determines if and how long to restrict the IP
» Releases the restrictions on the IP but keeps it under watch

This service not only enhances end users’ abilities to counter IP threats, but also avoids the taxing security processing many other IP reputation services impose. It can be used to power an IP intelligence service in network perimeter appliances to block traffic from malicious addresses, protecting sensitive data. It can also be used to track known proxies, allowing customers to prohibit malicious requests from phishing sites, such as man-in-the-middle attacks, or to respond with an alert.

Easy Integration

Using our intuitive REST services, STIX, and API, technology partners can easily integrate BrightCloud services into their own solutions. The BrightCloud IP Reputation Service integrates with existing security solutions through the same SDK as other BrightCloud services, making integration of multiple services easy. For BrightCloud IP Reputation, the full database is downloaded to the endpoint with an update recommended every five minutes.

Our partners across the globe have had tremendous success integrating Webroot intelligence into their network solutions, from next-generation firewalls to network load balancers. Because Webroot provides an uncomplicated integration, this solution can be implemented simply and easily by network and security vendors worldwide.

About Webroot

Webroot, an OpenText company, harnesses the cloud and artificial intelligence to protect businesses and individuals against cyber threats. We provide endpoint protection, network protection, and security awareness training solutions purpose built for managed service providers and small businesses. Webroot BrightCloud® Threat Intelligence Services are used by market leading companies like Cisco, F5 Networks, Citrix, Aruba, A10 Networks, and more. Leveraging the power of machine learning to protect millions of businesses and individuals, Webroot secures the connected world. Webroot operates globally across North America, Europe, Australia and Asia. Discover Smarter Cybersecurity® solutions at webroot.com.
