

Increase Revenue with Next-Generation Endpoint Security

Webroot is deeply committed to providing ConnectWise partners with a Smarter Cybersecurity™ solution for endpoints. Our full integration within ConnectWise® Automate™ provides for thorough and efficient management, empowering MSPs with robust status information and actions that make next-generation SecureAnywhere® Business Endpoint Protection an even more powerful solution.

This ConnectWise Automate integration delivers:

- » **Endpoint insight**
Deep management capabilities in the ConnectWise Automate Control Center
- » **Automation**
Built-in scripts make key functions accessible and easy to execute
- » **Simplified management**
Fully automated installation and malware remediation
- » **Alerts**
Infection status alerting and ticketing
- » **Granular agent status**
Global and client-level dashboards provide powerful visibility
- » **Seamless integration**
Integration with the Webroot Global Site Manager for complete MSP management capabilities

Benefits of Using Webroot with ConnectWise Automate

Compatibility

Suitable for all local and cloud versions of Automate 10 or greater

Plug-In ConnectWise Automate Module

Provides automatic installation and deep integration into the Automate Control Center

Global and Client Dashboards

Presents information on all clients and locations on one configurable screen

Dashboard Remote Monitors

Configurable monitors run every 5 minutes to 1 hour to check for active threats, agent status, and alerting

Powerful Webroot Scripts Commands enable agent polling, scans options, customer support diagnostics, plus agent install and uninstall

Data Collection

Generates meaningful and relevant data about every endpoint running a Webroot agent

License keycode integration

Supports simple, complex, and hybrid environments via MSP-generated child keys per end customer or group of customers

Why ConnectWise Automate Users Choose Webroot SecureAnywhere® Business Endpoint Protection

ConnectWise Automate integration

Unifies and improves administration and productivity

True standalone antimalware

No additional endpoint antimalware protection solutions are advised or required

Cloud-based architecture

Provides fully remote access and management

Highly effective protection

Minimizes support/help desk calls and user productivity losses and costs

Automated roll-back remediation

Minimizes reimaging costs

Zero definition or signature updates

Increases system performance

Intuitive, automated operational management

Lowers operational costs and ensures endpoints are always up to date

Low device footprint

Increases system performance

Installs in under 5 seconds[†]

Easy and non-disruptive to deploy

Intelligent, no-conflict agent

Runs alongside existing security software for a secure and rapid migration process

Powerful remote agent command toolset

Full remote control of individual or groups of endpoints

Global Site, User Group, and User Policies

Hierarchical policy application and enforcement

No on-premises management hardware or software

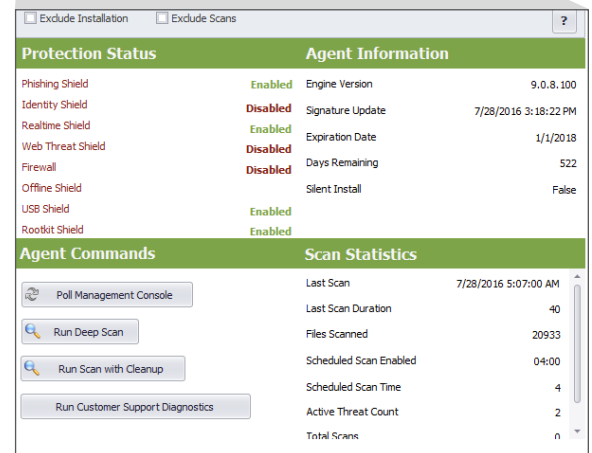

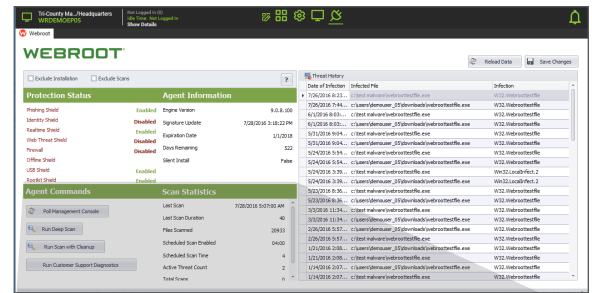

Cloud-based management console

Transparent scheduled scanning

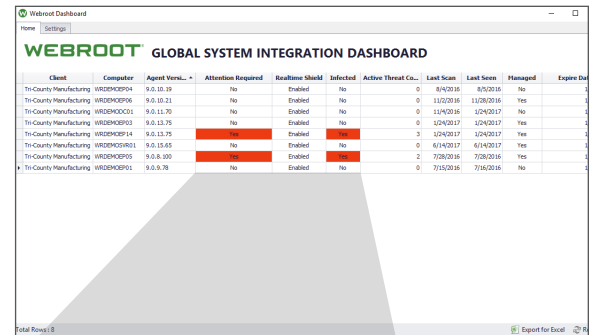

No user complaints about system performance

High user satisfaction

We work with thousands of MSP partners

ConnectWise Automate Control Center offers simplified management with options for granular information.
