∧ ATERA

All-in-One SaaS Cybersecurity Management for MSPs

Together, Atera and Webroot give managed service providers (MSPs) the all-in-one SaaS management and cybersecurity experience they need to provide superior service to their clients. By combining Atera's innovative blend of RMM, PSA, and remote access with easy-to-manage, highly-effective Webroot SecureAnywhere® Business protection, MSPs can keep clients and devices safe against the next generation of threats while reducing costs and growing profits.

This Atera integration delivers:

» **Automated Webroot licensing**
Easily buy and sign up for Webroot licenses through the Atera console

» **Scalable, automated deployment**
Deployment criteria integrated into Atera policies

» **Auto-discovery**
Automatic recognition and management for pre-installed Webroot agents

» **Granular visibility**
Visibility and control over all endpoints and sites under management for world-class client support

» **Simplified management**
Single-pane-of-glass dashboard that shows all infected devices

» **Powerful remote administration**
Remote remediation, scanning, and cleanup commands

» **Billing flexibility**
Activate Webroot from within Atera, pay as you go, no commitment
